

If your version of Linux has a package manager, you may wish to use that for installing the agent. If you are using Ubuntu, you can use **sudo apt-get install boinc-client boinc-manager** in the terminal to install the agent.

1. Go to the directory you downloaded the BOINC Linux installer (it will be named something like: boinc_#.##.##_i686-pc-linux-gnu.sh)
2. Follow the commands shown below.

```
File Edit View Terminal Help
keith@ubuntu64bit:~/Downloads$ ls
boinc_6.10.56_i686-pc-linux-gnu.sh
keith@ubuntu64bit:~/Downloads$ chmod +x boinc_6.10.56_i686-pc-linux-gnu.sh
keith@ubuntu64bit:~/Downloads$ ./boinc_6.10.56_i686-pc-linux-gnu.sh
use /home/keith/Downloads/BOINC/run_manager to start BOINC
keith@ubuntu64bit:~/Downloads$
```

Click "Finish"

3. When you have completed the steps shown, please start the BOINC manager with the command shown.
4. Once the BOINC Manager opens, there may be additional steps needed.
5. Select "Attach to project" and click "Next"
6. Please type in www.worldcommunitygrid.org in the URL field
7. If the User Information dialog (below) appears, just enter your Member Name

The image shows a window titled "BOINC Manager" with a close button in the top right corner. On the left side of the window is a vertical rectangular image of a blue and white BOINC logo. To the right of the logo, the text "User information" is displayed in bold. Below this, a message reads: "Please enter your account information (to create an account, visit the project's web site)". There are two input fields: "Username:" followed by a text box, and "Password:" followed by a text box. At the bottom of the window, there are three buttons: "< Back", "Next >", and "Cancel".

8. When these steps are completed, you should see a screen similar to this.

If you need more assistance, you can view the [World Community Grid Help](#), [visit our forums](#) to ask a question, or go to BOINC's [Linux Installation page](#).
