Tiki registrations: Passcode to register + JQ show it for humans

An easy trick (by luci: thanks!)

1. Enable the option "**Passcode to register**" (Admin home > Login > ...)
2. Code to add before the end `</body>` tag. (**Admin home > L & F > Customization > Custom end code**):
 1. If you are using some user tracker to collect more information from users at registration time, use this code:

code to add in Admin L & F Customization Custom end code

```
{if $mid eq "tiki-
register.tpl"}{jq}$( "form[name='editItemForm1']" ).prepend("<b>Passcode to
Register / Codi de pas per registrar-se:</b> <i>foo</i>bar
<br/>");{/jq}{/if}
```

2. If you just use the basic registration form by default (no user tracker to collect more information from users at registration time), then use this other code:

code to add in Admin L & F Customization Custom end code

```
{if $mid eq "tiki-
register.tpl"}{jq}$( "form[name='RegForm']" ).prepend("<b>Passcode to
Register / Codi de pas per registrar-se:</b> <i>foo</i>bar
<br/>");{/jq}{/if}
```
