

You can easily download your own videos of youtube (or even your entire playlists) through the application `youtube-dl` or `yt-dlp`.

- 1. In (K)Ubuntu 24.04
- 2. Failed in 24.04
  - 2.1. youtube-dl
  - 2.2. ! In Ubuntu 24.04 - failed
  - 2.3. yt-dlp

# 1. In (K)Ubuntu 24.04

In Kubuntu 24.04, I could download playlists with these apps that I could obtain from **Discover** app:

- Free/Libre Open Source Software:
  - **Ez Youtube Video Playlist Downloader**: worked like a charm.  
<https://snapcraft.io/ez-youtube-video-playlist-downloader><sup>[1]</sup>
- Proprietary:  
(free app for a short period of time)
  - **Video Downloader**. It seems to be a nice and simple GUI for yt-dlp, which does all the job in the background for you, just after you paste the playlist url and select whether you want audio or video.
  - **UMD4** (Ultimate Media Downloader). However, it seems to be an evaluation version, available for free during 15d
  - **Youtube Downloader**. However, it seems to be an evaluation version, available for free during 3d

Other options, from console (youtube-dl, yt-dlp, failed for me for different reasons, even if I could make them work in previous kubuntu versions)

# 2. Failed in 24.04
